Title: A School Web site.

Abstract: The website is used as an official website of a school. In this website the students are find their important notice, visitors can see the achivement of the school.

Developing Tools: We use the project language as html, ssc, php, lqSyM.

Fundamental:

Frontend:

- 01.** In the first page we show the introduction, principle spech and a picture of the school.
- 02.** In the second page we show the honuarable member of board of trusties, including their designation and mobile number.
- 03.** In the third page we show the list of the teachers of the school including their designation and mobile number.
- 04.** In the fourth page we show the academic calendar of the school
- 05.** In the fifth page we show the important notice for the student
- 06.** In the six page we show the achievments.
- 07.** In the seven page we show the contact.

Backend:

- 01.** We create a database name school.
- 02.** We create index.php for login, user name = root, password= neub
- 03.** We create the home.php page for update the information.
- 04.** We create the BoT.php page for adding, editing and deliting board of trusties.

05. We create the teacher.php page for adding, editing and deleting teachers information.
06. We create the academic.php page for adding, editing and deleting the academic calendar of the school.
07. We create the notice.php page for adding, editing and deleting the notice of the school.
08. We create the achievement.php page for adding, editing and deleting the achievement of the school.
09. We create the option logout for logging out from the web site.
